- Second Sprint Backlog (Owner: Edison Aviles)
  - Graphs show real model data (dynamic graphing)
  - Include time-based filtering of the visualized data based on user selection
  - Include google maps integration that receives the users geolocation and displays the nearby gyms
    - Upon clicking on a gym, a panel should pop up with information relative to that gym received from the google maps API
  - Continue working on UI
    - Include dynamic sizing of graphs relative to the size of the window and expansion/hiding of the sidebar
  - Finalize OAuth
